

files/items.xml

```
<items>
  <item link="http://qt.nokia.com">Qt</item>
  ...
</items>
```

all item elements

```
XmlListModel {
    source: "files/items.xml"
    query: "//item"
    XmlRole { name: "title"; query: "string()" }
    XmlRole { name: "link"; query: "@link/string()" }
}
```

xml-list-model.qml

Result

title: "Qt"

link: "http://qt.nokia.com"
